

HUMIDITY SEPARATORS S10H (Baffle design)

DESCRIPTION

When wet steam is used in sterilization, moisture in suspension reduces the heat transfer efficiency, and the validity of the sterilization process can be compromised.

The ADCAPure S10H series baffle separators remove moisture from steam pipelines. Steam passes through the separator and as a result of expansion, impact and swirling effects, the particles with a heavier specific gravity are separated, such as water droplets and moisture in suspension.

The condensate collected at the bottom of the separator must be automatically drained by a suitable steam trap.

MAIN FEATURES

- 316L stainless steel construction.
- No moving parts.
- Self drainable design.
