

SANITARY PILOT OPERATED PRESSURE REDUCING VALVE P147

DESCRIPTION

The ADCA P147 series sanitary pilot operated pressure reducing valves are designed for use with clean air, nitrogen, carbon dioxide, oxygen, argon and other gases or liquids compatible with the construction materials and valve design.

This valve is specifically designed for the high purity gas systems found in the pharmaceutical, cosmetic, fine chemical and food & beverage processes.

MAIN FEATURES

Precise control of downstream pressure from 0,2 to 8 bar.

Completely machined from 316L stainless steel bar stock, no castings or forgings are used.

FDA / USP Class VI compliant seals.

Guided piston and valve stem.

Non-rising adjustment knob.

Internal wetted parts: ≤ 0,51 micron Ra – SF1.

External: ≤ 0,76 micron Ra – SF3.

Other surface conditions see IS PV20.00 E – Technical information.

Ultrasonic cleaning.

OPTIONS: Bottom cover with drain connection.

Leakage line connection 1/8" (captured vent).

Gauge connections on body.

USE: Clean air, nitrogen, carbon dioxide, oxygen,

argon and other gases compatible with the

construction.

Clean steam (under special request).

AVAILABLE

MODELS: P147.

SIZES: 21/2" to 3"; DN 65 to DN 80.

REGULATING

RANGES: 0.2 - 1.5 bar; 0.3 - 3 bar; 2 - 8 bar.

CONNECTIONS: ASME BPE and DIN clamp ferrules.

Others on request.

PACKAGING: Assembling and packaging in a clean room

certified according to ISO 14644-1.

The product is end capped and sealed with recyclable thermo-shrinkable plastic film, to

avoid contamination.

INSTALLATION: Horizontal installation.

See IMI - Installation and maintenance

instructions.

LIMITING CONDITIONS					
Valve model	P147				
Body design conditions	PN 16				
Maximum upstream pressure	16 bar				
Maximum downstream pressure	8 bar				
Minimum downstream pressure	0,2 bar				
Maximum design temperature *	150 °C				

^{*} Others on request.
