

TANK BLANKETING REGULATORS **BKRi2** (Low pressure reducing valve)

DESCRIPTION

Tank blanketing valves are commonly used in tank storage systems to prevent and protect against explosions (avoiding flammable liquids being vented from the vessel), to control product contamination against external air that may fill the vapour space, to reduce evaporation losses (consequently, production losses), to reduce internal corrosion (caused by air and moisture) and to prevent vacuum condition. The blanketing process consists in covering the stored medium, usually a liquid, with a gas (normally N2).

MAIN FEATURES

Compact design. Non-rising adjustment knob. FDA / USP Class VI compliant seals.

STANDARD SURFACE FINISH

Internal movable parts and machined surfaces: $\leq 0,76 \ \mu m \ Ra - SF3$. Other surfaces: as casted. Ultrasonic cleaning.

OPTIONS:	Leakage line connection. Dome-loading. Top cap (adjustment screw with cover). Gauge connection on body. External sensing line connection (recommended for low set pressures < 10 mbar or high flow). Blanketing with vacuum. ATEX & version.
USE:	Air, nitrogen, argon and other gases compatible with the construction.
AVAILABLE MODELS:	BKRi2 – low pressure reducing valve.

SIZES: 1/2" and 1"; DN 15 and DN 25.

- REGULATING RANGES: 5 to 10 mbar; 10 to 50 mbar; 20 to 200 mbar; 50 to 500 mbar; 5 to 4000 mbar (dome-loading).
- CONNECTIONS: Flanged EN 1092-1 PN 16. Flanged ASME B16.5 Class 150.

(PED – European Directive)

I IMITING CONDITIONS *

INSTALLATION: Vertical installation recommended, to allow drainage, or horizontal as close to the process as possible in order to prevent long pipe sections and flow restrictions. See IMI - Installation and maintenance instructions.

LIMITING CO	NDITIONS *	
Maximum allowable pressure		16 bar
Maximum upstream pressure	Seat Ø5 mm	12 bar
Maximum upstream pressure	Seat Ø8 mm	6 bar
Maximum downstream pressu	500 mbar	
Minimum downstream pressure		5 mbar
Maximum operating temperat	ure	130 °C
* 0 / // //		

* Other limits on request. Maximum operating conditions may be limited by the valve end connections due to normative restrictions. ** 4000 mbar with dome-loading.
