

AUTOMATIC AIR AND GAS VENTS FOR LIQUID SYSTEMS AE50i

(Stainless steel 1/2" x 1/2" to 1" x 1/2"; DN 15 x 1/2" to DN 25 x 1/2")

DESCRIPTION

The AE50 range of automatic vents are designed to remove air or gases from water and other liquid systems, without requiring any external source of energy.

They are capable of handling significant loads during start-up while still being able to discharge smaller loads in continuous modulating operation with one single orifice.

These ball float type vents are manufactured in stainless steel, available with soft sealing, and can be used in combination with other air elimination and separation systems or directly applied at high points in the pipelines.

Suitable for start-up and continuous operation with one single orifice. Allow fast and easy inline maintenance.

Corrosion resistant internal parts.

No balancing pipe required.

OPTIONS: Different soft sealing options.

Metal to metal sealing.

USE: Cold, hot and superheated water or other liquids

compatible with the construction.

AVAILABLE

MODELS: AE50i – stainless steel.

SIZES: 1/2" x 1/2", 3/4" x 1/2" and 1" x 1/2";

DN 15 x 1/2", DN 20 x 1/2" and DN 25 x 1/2".

CONNECTIONS: Female threaded ISO 7 Rp or NPT.

Flanged EN 1092-1 PN 40.

Flanged ASME B16.5 Class 150 or 300.

INSTALLATION: Vertical installation.

It must be installed absolutely vertically at the points in the plant where the air tends to collect. The drain should be piped to a safe location.

See IMI – Installation and maintenance

instructions.

TMO – Maximum operating temperature:

Metal to metal sealing: 250 °C; EPDM valve sealing: 130 °C;

FPM / Viton valve sealing: 200 °C.
Min. liquid specific weight: 0,75 kg/dm³.

* According to EN 1759-1:2004.

Body limiting conditions PN 40 or below, depending on the type of connection adopted. Rating PN 40 for threaded versions.

Values shown refer to capacities of air discharge at 15 $^{\circ}$ C, under average atmospheric pressure (1013 mbar). If the temperature of the air differs from 15 $^{\circ}$ C, the discharge capacity can be corrected by multiplying it by: temperature in $^{\circ}$ C.

288 , where T is the actual 273 + T

It may be assumed that the temperature of the air is equal to the temperature of the water.
