

AUTOMATIC AIR AND GAS VENTS FOR LIQUID SYSTEMS AE50

DESCRIPTION

The ADCA AE50 is a series of automatic vents designed to remove air or gases from water and other liquid systems, without requiring any external source of energy.

These ball float type vents are manufactured in carbon or stainless steel, available with metal or soft sealing, and can be used in combination with other air elimination and separation systems or directly applied at high points in the pipelines.

MAIN FEATURES

Allows fast and easy inline maintenance.

Corrosion resistant internal parts.

No balancing pipe required.

OPTIONS: Different soft sealing options.
Metal to metal sealing.

USE: Cold, hot and superheated water or other liquids compatible with the construction.

AVAILABLE MODELS:

AE50S – carbon steel.

AE50i – stainless steel.

SIZES: 1/2" x 1/2", 3/4" x 1/2" and 1" x 1/2";
DN 15 x 1/2", DN 20 x 1/2" and DN 25 x 1/2".

CONNECTIONS: Female threaded ISO 7 Rp or NPT.
Flanged EN 1092-1 PN 40.
Flanged ASME B16.5 Class 150 or 300.

INSTALLATION: Vertical installation.
It must be installed absolutely vertically at the points in the plant where the air tends to collect.
The drain should be piped to a safe position.
See IMI – Installation and maintenance instructions.

PMO – Maximum operating pressure: 30 bar.

TMO – Maximum operating temperature: Metal to metal sealing: 250 °C; EPDM valve sealing: 130 °C; FPM / Viton valve sealing: 200 °C.

Minimum liquid specific weight: 0,75 kg/dm³.

* According to EN 1092-1:2018. ** According to EN 1759-1:2004.

Body limiting conditions PN 40 or below, depending on the type of connection adopted. Rating PN 40 for threaded versions.

FLOW RATE CAPACITY (NL/min)

MODEL	DIFFERENTIAL PRESSURE (bar)																	
	0,5	1	2	3	4	5	6	7	8	9	10	12	15	18	20	22	25	30
AE50S and AE50i	31	46	72	96	120	144	168	192	216	241	265	313	385	457	505	553	626	746

Values shown refer to capacities of air discharge at 15 °C, under average atmospheric pressure (1013 mbar).

If the air temperature differs from 15 °C, the discharge capacity can be corrected by multiplying it by: $\frac{288}{273 + T}$, where T is the actual temperature in °C.
It may be assumed that the temperature of the air is equal to the temperature of the water.
