SENSING LINE CONNECTION OPTIONS

EXTERNAL SENSING LINE

For use with liquids below 130 °C.
For use with gases below 90 °C. For gases between 90 °C and 130 °C, please consult the manufacturer.
Installation with the actuator oriented upwards is also acceptable.
The sensing line should be connected at least 1 meter downstream of the valve outlet.

SENSING LINE CONNECTION ON BODY

For use with liquids below 130 °C.
For use with gases below 90 °C. For gases between 90 °C and 130 °C, please consult the manufacturer.
Installation with the actuator oriented upwards is also acceptable.
The valve can be supplied with the sensing tube factory-installed. If not supplied installed, the connection at the body is delivered closed with a plug.
The image shows the connection and sensing tube positioned on the left side relative to the flow direction. If installation constraints require, the connection may also be made on the right side. For valves up to DN 25, the sensing connection is located at the cast boss on the bottom of the valve body.

(a) Connections are closed with plugs in case the valve is not supplied with the tube pre-assembled from factory.

HOW TO ORDER

Indicate the complete valve ordering code together with the required actuator size. If the valve is to be supplied with factory-installed sensing tube, it must be stated in the order.

Example: RPW45B1S61EWXXXU50 fitted with A2 actuator and sensing line connection on body.
